IP BANS ON FORUMS ARE A BUG!

I am working to resolve an issue which has many people banned. This is coming from a problem between Cloudflare and Phpbb settings. We do not know what exactly is yet. We are working to resolve this. I will manually unban all members in good standing who have been taken over by this bug. This has happened to many of you. Nothing to worry about here however.

The issue is that our DDoS protection gives you certain IP's which many people can share, ultimately resulting in some people getting banned. This has also happened due to coincidences like VPN's and other issues.

Apologies for such inconveniences caused.

Normally, this should be already restored as all the banned IP's have been removed.
